

2015 Capital Improvement Plan Project for Street, Drainage and Waterline Improvements

September 9, 2016 Project Update:

Waterlines are in service on Osage and Goldenrod. The Contractor has installed waterlines at the intersection of Forest Waters Circle near the large pond and will begin drainage work in this area soon. Residents should expect traffic delays at this intersection for the next few weeks as drainage and road repairs are being made. Watermain installation continues on Timber Rose and adjacent streets. Trenching has been completed on Timber Rose, Goldenrod Circle, Sumac Circle and is in process on Sorrel Lane.

Curb installation is scheduled to begin within the next two weeks, weather permitting. The contractor will finalize drainage work on Fairview and Osage within the next two weeks.

Progress has been slowed due to rain and weather conditions, however the contractor continues to make progress. You can expect to see portions of the project, beginning at Fairview Circle, being completed with curbing, paving and final grading over the next few weeks. More detailed schedules and road closure details will be provided as they are made available.
